Part V

Appendices & Disclosures

Section 5.1

Details on Methodology

Methodology

Asset Class Comparisons and Correlations

The asset classes are defined as follows. For real estate, the FTSE EPRA Nareit indices are used. For broad equities, the national headline index is used (i.e. FTSE 100, CAC 40 etc.) and for multi-country profiles, the FTSE All-world index series is used. For bonds, the JPMorgan Bond index series is used.

Dividend Yields

The dividend market capitalisation (defined as the dividend multiplied by the shares in issue and free float percentage) paid during the last twelve months as a percentage of the investable market capitalisation of the index.

Local Currency Indices

The local currency indices are claculated using the following approach:

Index Value _t =
$$\frac{\text{Index Value}_{t-1}}{\sum_{\text{For Regional Global}} \left(\frac{\text{Market Cap Country Index}}{\text{Market Cap Regional / Global Index}} \right) \left(\frac{\text{Local Currency Country Index}_t}{\text{Local Currency Country Index}_{t-1}} \right)}$$

Risk/Return Profiles

The risk/return profile-value is determined by the 10Y average risk (calculated by the standard deviation) on the X-axis and the 10Y average return on the Y-axis.

Methodology

Volocity

This liquidity measure is calculated by the number of shares traded over a 12-month period divided by the free-float adjusted shares in issue at the end of the period.

Volatility

The volatility shows the variability of returns over a 10-year period, revealing the extent by which the returns of an index value change from the average. Low volatility indicates the returns for an index have stayed quite close to the average whereas a high volatility would indicate a larger fluctuation over thetime period. Volatility can therefore be seen as a market measure for risk.
